

Why Sustainability?

“ At Turning Point, we are passionate about sustainability. We want our work to have an IMPACT and know our future efforts will have an even GREATER IMPACT on society. ”

Many owners and managers of commercial real estate, including Turning Point Commercial, believe that sustainability and corporate responsibility initiatives are just some of the ways to drive long-term growth and value creation within the industry.

We take that belief and develop plans for sustainability initiatives. We will focus on energy efficiencies, ENERGY STAR® Certification, LEED, and evaluate your current basic operational business practices to create a tailored sustainability solution strategy for you.

FEATURES OF A SUSTAINABLE BUILDING

Moving towards a CLEANER WORLD

Green buildings not only contribute towards sustainable construction and environmental awareness, but also bring benefits and advantages to building owners and users. Lower development costs, lower operating costs, increased comforts, healthier indoor environment quality, enhanced durability, and less maintenance costs are hallmarks of a typical green building.
